

Benefits of forged Magnesium wheel

- [1] Resistance to oxidization- easy to maintain and keep clean.
- [2] Supplied ready to fit.
- [3] No air leak
- [4] Choice of 5 spoke Type-C or 10 spoke Type-R
- [5] 6 colors available - Pearl white/Black metallic/Polished/Gunmetal/Bronze/VI gold

METALLIC DENSITY

Special character of GALE SPEED TYPE-M

Original equipment cast wheels have the mass in the rim, which can cause gyroscopic effect whereas Galespeed wheels have the mass centered in the hub, which results in better maneuverability, braking and acceleration as well as reducing wear and tear on tires and brake pads.

The method of manufacturing results in a much stronger material than used in original cast alloy wheels and therefore allows for thinner rim construction, which effectively reduces the wheels weight whilst retaining the necessary strength for road use.

Balance
Galespeed wheels are perfectly balanced. Fitting lighter wheels will result in better acceleration, better braking and less gyroscopic effect meaning the bike will handle better, respond easier to rider input and "turn in" quicker.

Safety
GALESPEED wheels are tested to JWL. Many of TYPE-C and TYPE-R are also TUV approved.

Adapter System
It makes easier to machine inside of the hub to the limit. Important: Do Not disassemble the hub adapter. It causes serious malfunctions of the wheel.

Sprocket
Originally designed and manufactured by AFAM. Material: A7075
IMPORTANT: Galespeed wheels do not accept original equipment sprockets.

Spacer
Material: A7075 hard anodized
Fits perfectly each model.

Bearing
Japanese bearing KOYO guarantees reliability.
